WHAT IS VHL (von Hippel-Lindau Disease)?

VHL is a genetic condition which causes tumor growth in several areas of the body:

- Kidneys
- Pancreas
- Retina
- Adrenals
- Brain & Spinal Cord
- Inner Ear
- Reproductive Organs

If not treated correctly, tumors in the kidneys and pancreas can advance to malignant forms of cancer.

The VHL gene controls the major feeding pipeline of every tumor.

Curing VHL brings us one step closer to curing many forms of cancer!

VHLFA is dedicated to research, education, and support to improve diagnosis, treatment, and quality of life for those affected by VHL.

ALL PROCEEDS FROM THIS EVENT WILL GO DIRECTLY TOWARD RESEARCH FOR FINDING A CURE
